PROFESSIONAL SUMMARY

Results-driven QA Automation Engineer with 2.5+ years of experience across web, mobile, healthcare, government and hospitality-tech applications. Strong expertise in Playwright with JavaScript/TypeScript: building Page Object Model frameworks from scratch, automating end-to-end, UI and API-level tests, and turning large manual test trackers into a classified, traceable automation strategy. Automated 200+ test cases on a government tax platform, reducing manual testing effort by 40%, and now delivers a Playwright and TypeScript framework and a 1,571-case automation strategy on a hospitality hiring platform. Proficient in REST API testing, request mocking, CI/CD with GitHub Actions and Docker, defect analysis and Agile/Scrum. Uses Claude Code, GitHub Copilot and MCP-based workflows to draft and optimize test cases and scripts, verifying every AI output against the running product.

EXPERIENCE

QA Engineer | Paathz

Aug 2026 – Present

Freelance | Project: Paathz — Hospitality Hiring Platform | Talent, Recruiter and Admin Portals

- Developed a Page Object Model framework from scratch in Playwright and TypeScript: 14+ page objects, shared fixtures with worker-scoped login caching, role-based login helpers, @smoke / @critical / @regression tags and a CI smoke subset.
- Built the automation strategy for 1,571 test cases, with target spec, page object, fixture, rationale, implementation sequence and an audit trail.
- Automated API-level checks inside E2E suites: verified request payloads and responses for key user actions; handled 404, 429 and duplicate-application responses; mocked backend endpoints via route interception so tests never change real data.
- Designed a write-safety model: tests that change real data are tagged and isolated in an opt-in config (explicit env var, one worker, no retries).
- Proved tests can fail: mutation-checked tests by deliberately breaking the feature and fixed false-green assertions; made tests resilient to changing staging data (expired jobs, ended interview slots, timezones) by deriving expectations from API records.
- Found and documented product defects with evidence, separating test, data and app causes: filter not persisting after refresh, salary period mislabelled, accessibility violations and a login side effect on user profiles.
- Wrote and maintained 1,500+ manual test cases (ID convention, P0–P3 priorities, traceability to automation), using AI (Claude, Claude Code) to draft cases and verifying every output against the live product.
- Set up Allure reporting with traces on failure.

QA Engineer | Tanama Software

July 2025 – July 2026

Project: Capture — US Property Tax Administration System | Tax Domain | Revenue & Government Systems for Alabama, USA

- Designed and developed a scalable end-to-end UI automation framework using Playwright with JavaScript and Playwright Test Runner, following Page Object Model (POM) and fixture-based architecture.
- Automated 200+ UI test cases covering critical business workflows, including regression, smoke and sanity suites.
- Implemented custom fixtures for reusable test setup, authentication handling and cross-test dependency management, improving execution efficiency and maintainability.
- Configured and maintained CI/CD pipelines using GitHub Actions; authored a workflow (.yml) with build, install and test stages running Playwright suites in parallel shards on every pull request, with a quality gate that blocked merges on test failures or coverage regressions and Allure reports published as pipeline artifacts.
- Integrated test suites with Docker-based execution environments for consistency across environments.
- Executed TypeScript Playwright scripts with Allure Reports, HTML reports, Playwright Trace Viewer, screenshots and video capture to streamline failure analysis and improve test visibility.
- Tracked and managed defects in JIRA, achieving a 95% on-time defect closure rate and reducing critical defect leakage by 28%.
- Leveraged GitHub Copilot, Claude Code and MCP-based workflows to generate and optimize test cases and scripts, and performed AI-based testing to improve test design speed and edge-case coverage.

Associate QA Engineer | Seanergy.ai

Feb 2025 – June 2025

Domain: Medical Device Testing | Fluke Biomedical | Healthcare Quality Standards | System Reliability & Compliance

- Designed 150+ test cases using Boundary Value Analysis (BVA) and Equivalence Class Partitioning (ECP), increasing test coverage by 40%.
- Automated API test workflows using Postman collections, pre-request scripts and environment variables, reducing manual testing effort by 40%.
- Performed API and backend validation ensuring 98% data accuracy and reducing API-related production issues by 30%.
- Conducted database testing using SQL queries and data validation, improving data integrity compliance by 35%; validated CRUD operations across all application modules.
- Developed and maintained a Requirements Traceability Matrix (RTM), achieving 100% requirements coverage and reducing requirement gaps by 25%.
- Applied SDLC, STLC and Defect Life Cycle practices in Agile/Scrum sprints, improving delivery efficiency by 15%.
- Collaborated during defect triage, reducing rework cycles by 20% and improving defect resolution turnaround time by 18%.

QA Engineer Trainee | Dhanush Infotech | E-Ring IT Solutions Pvt. Ltd. *Apr 2024 – Jan 2025*

Projects: 1962 Veterinary Services (Haryana Govt.) • Staff App (Mobile) • Tracnovate Ambulance Tracking System

- Analyzed Business Requirement Documents (BRD) and derived 180+ test scenarios, improving functional coverage by 35%.
- Designed and executed Functional and Regression test cases across web and mobile platforms, reducing regression defects by 30%.
- Conducted Root Cause Analysis (RCA) on recurring defects, reducing the repeat defect rate by 25%.
- Performed Smoke, System and UAT testing, contributing to 20% faster production deployment cycles; supported UAT cycles with a 90%+ client satisfaction score and 22% fewer post-UAT change requests.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript
Frameworks: Playwright, Automation Framework Design, UI & API Automation, End-to-End Testing
Design Patterns: Page Object Model (POM), Fixtures (incl. worker-scoped), Playwright Test, BDD Cucumber, Tag-based Suites (@smoke, @critical, @regression)
API Testing: REST API Testing, Playwright API, Postman, Swagger, Payload & Status-code Validation (404, 429), API Mocking & Route Interception, Read-only API Probes
CI/CD Tools: Jenkins, GitHub Actions, Docker
Version Control: Git, GitHub, Bitbucket, Pull Requests & Code Review, pnpm Monorepos
Reporting: Allure Reports, HTML Reports, Playwright Trace Viewer, TestRail
Test Mgmt.: JIRA, TestRail, Test Strategy, Test Planning, Test Automation Strategy, Requirements Traceability, Defect Analysis, Risk-based Testing
Test Quality: Mutation Checks, False-green Test Detection, Test Data Resilience, Write-safety Isolation for Shared Environments
Databases: MySQL
Security: Burp Suite
Cloud: AWS (S3, EC2 - Familiar)
AI Tools: GitHub Copilot, MCP, Claude Code, n8n — used for AI-assisted test case generation and AI-based testing
Testing Types: Functional, Regression, Cross-browser, Smoke, Integration, Accessibility and Manual Test Design
Other: Excel Automation (openpyxl), Staging Environment Testing

KEY PROJECTS

Paathz — Hospitality Hiring Platform | Paathz

Talent, Recruiter and Admin Portals | Test Automation Strategy | UI & API Automation

- Built a Playwright and TypeScript POM framework and a 1,571-case automation strategy.

Capture — US Property Tax Administration System | Tanama Software

Tax Domain | Revenue Systems | Government Applications | Data Compliance & Backend Validation

- Ensured compliance, data accuracy and end-to-end backend validation for a state-wide property tax revenue system serving the State of Alabama, USA. Maintained 100% RTM coverage and zero P1 defects at release.

Fluke Biomedical — Medical Device Testing & Validation | Seanergy.ai

Medical Device Testing | Healthcare Quality Standards | System Reliability | Compliance Validation

- Performed medical device testing for Fluke Biomedical, validating system accuracy, reliability and adherence to healthcare quality standards. Executed automation using Playwright with TypeScript, achieving a 30% reduction in post-release defects.

OpenCart Playwright Automation Framework | Personal Project

End-to-End UI Automation | Page Object Model | Open Source

- Built a standalone Playwright automation framework for the OpenCart e-commerce demo site using POM and JavaScript/TypeScript, covering core shopping flows end-to-end.

Repo: github.com/PavanSai7075/Open-Cart_Playwright-Framework-master

Portfolio: Live project showcase, automation samples and testing artifacts: pavansai7075.github.io/pavan-portfolio

EDUCATION

B.Tech, Electronics & Communication Engineering — Sree Chaitanya Institute of Technological Sciences | 2018 – 2022
